PROFESSIONAL SUMMARY

Results-driven Full-Stack Developer with strong experience in building scalable web applications, optimizing high-traffic backend systems, and automating enterprise workflows. Proven track record of reducing operational bottlenecks by up to 60% through AI-driven integrations, robust database architecture, and automated reporting systems across 30+ branches.

TECHNICAL SKILLS

Programming Languages: PHP, Python, Typescript, JavaScript, SQL, HTML/CSS

Frontend: React.js, Next.js, TailwindCSS, Material UI

Backend: Laravel, Node.js, Golang, REST API

Architecture: Monolithic Architecture, RESTful API Design, Event-Driven Integration, MVC Pattern.

Database: PostgreSQL, MySQL, MongoDB, SQL

DevOps & Infrastructure: Docker, Nginx (Reverse Proxy), CI/CD, TimescaleDB

AI & Machine Learning: LLM API Integration, Prompt Engineering, NLP-based Text Classification, Chatbot Development

Tools: Git, Postman, DBeaver, PGAdmin, VSCode, Draw.io, Excalidraw, Canva

SOFT SKILLS

Skills: Cross-Functional Collaboration, Technical Problem Solving, Stakeholder Communication, Rapid Prototyping, Systems Troubleshooting, Technical Documentation

WORK EXPERIENCE

IT Staff

July 2025 – Present

PT Jayamandiri Gemasejati | JG Motor | Bandung, Indonesia

- Developed and maintained core internal web applications using PHP and Smarty Template Engine, supporting daily operations across 35 branch locations.
- Managed database integrity, server configurations, and enterprise network infrastructure to ensure continuous operational uptime.
- Collaborated directly with department heads to translate branch operational bottlenecks into automated software solutions.

Key Achievements:

- **Engineered and deployed an AI-driven classification chatbot**, reducing customer inquiry response latency by **45%** and automating lead routing between sales and spare parts divisions.
- **Optimized high-latency SQL queries and reporting pipelines** using Python (Jupyter Notebook), cutting data extraction and report generation time by **~50%** during peak billing periods.
- **Architected a containerized WhatsApp Notification Gateway (WAHA)** using Docker, automating real-time internal alerts and saving **10+ operational hours weekly**.

Web Developer

December 2023 – May 2024

PT Oktagon Global Utama | Tangerang, Indonesia

- Engineered scalable backend logic and maintained RESTful API services for commercial web platforms using PHP and Laravel.
- Collaborated with engineering teams to conduct system refactoring, bug fixes, and continuous performance tuning.

Key Achievements:

- **Optimized SQL database query indexing and transaction pipelines** for platforms handling **10,000+ daily transactions**, consistently maintaining sub-200ms backend response times.

- **Patched core logic bottlenecks and improved endpoint reliability**, reducing transactional failure rates by **~25%** during sudden high-traffic spikes.

Data Analyst Intern *August 2023 – October 2023*

PT Telkom Indonesia Tbk | Bandung, Indonesia

- Audited and validated field installation entries submitted by technicians to ensure accurate infrastructure mapping.
- Assisted senior data teams in maintaining daily regional deployment databases and compiling weekly progress dashboards.

Key Achievements:

- **Reconciled physical deployment records for 500+ Optical Distribution Points (ODP)**, achieving a **98% data integrity rate** in the master asset database.
- **Designed automated data validation workflows**, decreasing weekly progress report preparation turnaround by **30%**.

PROJECTS

Industrial 4M Change Management Platform *February 2026 – Present*

Independent Web Developer (Contract) | PT Caturindo Agungjaya Rubber

- Developed an internal auditing and approval portal to monitor manufacturing deviations across Man, Machine, Material, and Method (4M) parameters.
- Digitized legacy paper-based production logs into a centralized dashboard, cutting audit trail verification time from days to minutes.
- Designed automated notification triggers for production line supervisors to prevent non-compliant parts from moving to assembly.

TASYA – AI-Powered WhatsApp Customer Assistant & CRM *January 2026 – February 2026*

Lead AI & Integration Engineer | PT Jayamandiri Gemasejati (JG Motor)

- Architected an automated customer classification bot to route incoming WhatsApp inquiries between sales and spare parts divisions across 32 dealership branches.
- Integrated containerized WhatsApp HTTP API (WAHA) with backend routing logic, reducing customer initial response latency by **45%**.
- Built automated lead-capturing workflows to streamline customer data dispatch directly to branch sales representatives.

Automated Engineering Document Approval & Stamping System *April 2025 - December 2025*

Independent Web Developer (Contract) | PT Caturindo Agungjaya Rubber

- Engineered a web-based document management pipeline to automate verification, approval, and version control for automotive engineering drawings.
- Integrated Ghostscript and FPDI to automatically inject dynamic QR verification codes and tamper-evident borders into uploaded technical PDF files.
- Implemented strict file validation and role-based access control (RBAC), accelerating engineering sign-off workflows by **70%**.

EDUCATION

Bachelor of Computer Science – Informatics Engineering *2020 – 2024*

Universitas Komputer Indonesia (UNIKOM), Bandung, Indonesia

- GPA: 3.70 / 4.00
- Thesis: Development of The Vocabulary Application For Web-Based Foreign Language Vocabulary Training

CERTIFICATIONS

- Agate Academy – Fundamental Game Design (2026)
- Badan Nasional Sertifikasi Profesi (BNSP) – Junior Web Programmer (2024)
- Aplikasi Pengembangan Pelatihan & Service Centre (AP2SC) - Computer Technician (2023)
